Problem statement -

Users who add products to their shopping carts often leave the shopping journey without completing their purchases. This creates a gap between purchase intent and actual conversions, resulting in potential revenue loss for the business and a disrupted shopping experience for users.

Goal And what are my non goals-

Goals

1. Increase revenue by helping more users complete their purchases.
2. Increase customer confidence and trust to make the final purchase
3. Improve the conversion rate from adding to cart to completing a purchase.
4. Reduce cart abandonment by making the buying journey easier.

Non-Goals

A. Build a new shopping application or selling platform.
B. Force users to buy alternative products instead of their chosen products.
C. Focus only on new customers while ignoring existing customers.

Success metric

North Star - Increase completed orders and revenue month over month.

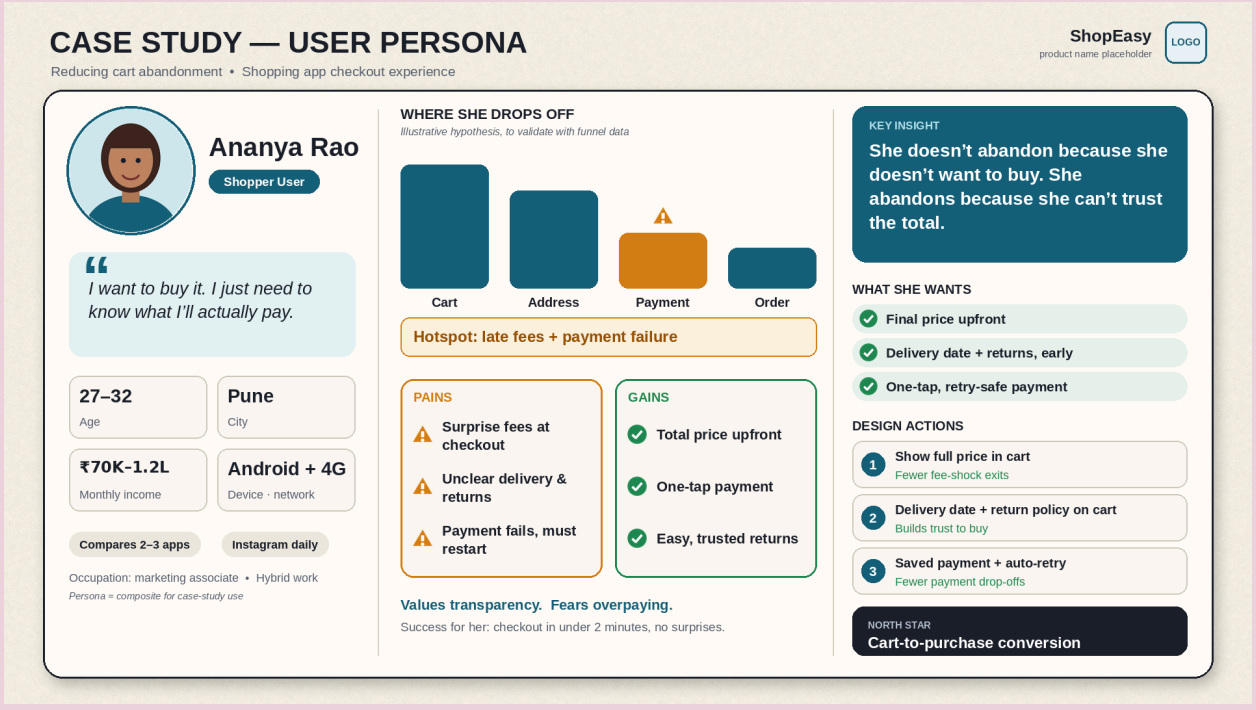

L1 -

1. Number of completed orders.
2. Cart-to-purchase conversion rate.
3. Number of orders per customer.

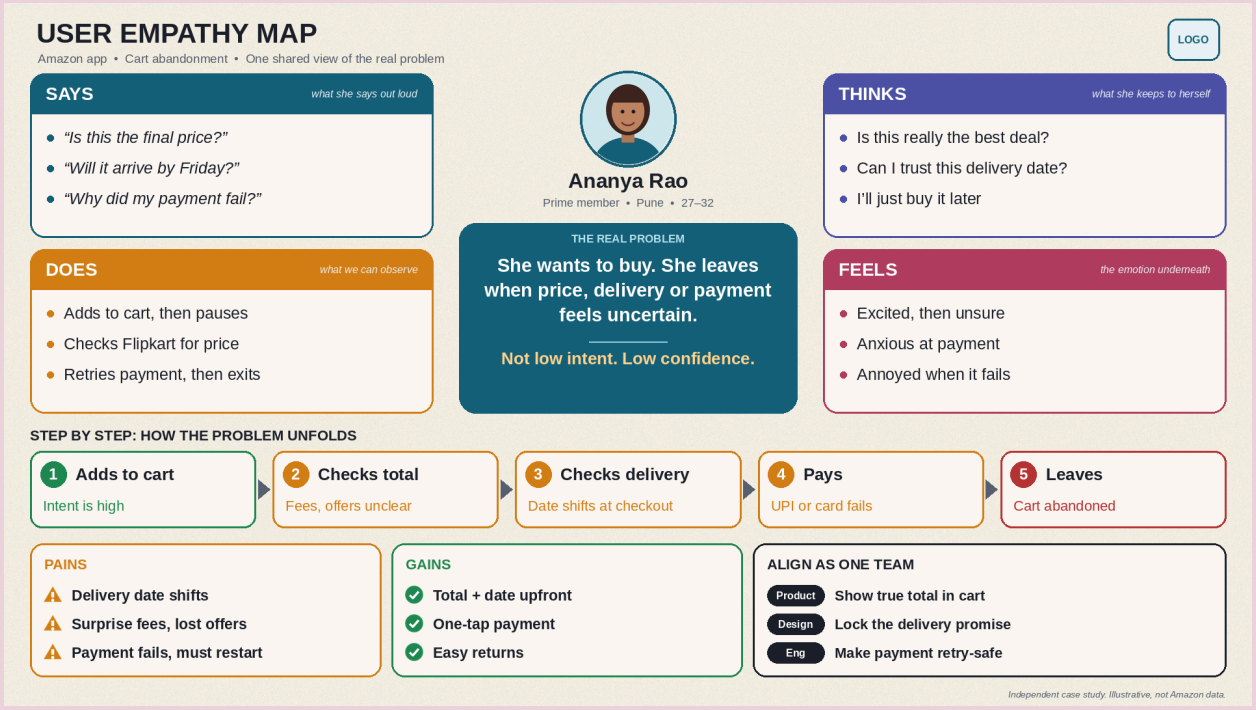

Counter -

4. Cart abandonment rate.
5. D30 customer inactivity rate.
6. Checkout error rate.

User PERSONA

User Empathy Map

What is the competitor offering

a. **True Total:** Show one all-in price (items, fees, offers) in the cart before checkout.

b. **Locked Delivery Promise:** Show the delivery date and return window in the cart, and keep them unchanged at payment.
c. **Retry-Safe Payment:** If UPI or card fails, keep the cart and payment details so she can retry or switch in one tap.

RICE-inspired prioritization

Opportunity	**Reach**	**Impact**	**Confidence**	**Effort**	**Priority**
True Total	MED	HIGH	MED	MED	P0
Locked Delivery Promise	HIGH	HIGH	HIGH	MED	P1
Retry-Safe Payment	MED	MED	HIGH	HIGH	P2

FUNCTIONAL AND ACCEPTANCE CRITERIA / NON-FUCTIONAL REQUIREMENTS

a. **Functionals -** A user with items in the cart can see the true total and the delivery date and complete payment in a few steps. If payment fails, the cart and payment details stay intact so she can retry without starting over.
b. **Non-functional requirement -**
    i. **P - performance** - cart total and delivery date load within 2 seconds. Payment retry starts within 3 seconds.
    ii. **Q - Quality -** The delivery date shown is met in at least 95% of orders. Checkout needs no user correction or rework after an error.
    iii. **R - Reliability -** Cart details remain saved after app closure, network failure, or payment failure. No duplicate orders or charges.
    iv. **S - ˇSecure -** Only authorized services and users can access payment and address data.
    v. **T - Transparency** - Clearly show all fees, offers, delivery dates, and payment failure reasons.
    vi. **U - Useability -** Users can complete checkout in minimal steps and retry failed payments with one tap.
